16103886D HOUSE BILL NO. 576 1 2 Offered January 13, 2016 3 Prefiled January 11, 2016 4 A BILL to amend and reenact § 56-235.1 of the Code of Virginia, relating to electric and natural gas 5 utilities; energy efficiency goals established. 6 Patrons—Sullivan and Murphy 7 8 Referred to Committee on Commerce and Labor 9 10 Be it enacted by the General Assembly of Virginia: 1. That § 56-235.1 of the Code of Virginia is amended and reenacted as follows: 11 § 56-235.1. Conservation and efficient use of energy and capital resources. 12 13 A. Utilities shall, to the extent possible, meet their resource needs, such as for generation, 14 transmission, fuel, or purchases of capacity or energy, first through energy efficiency with lower costs 15 and emissions. If, in any proceeding, the Commission finds that the need for one or more resources can be deferred or avoided, in whole or in part, through efficiency programs or measures with lower costs 16 and emissions, then it shall order that such energy efficiency programs or measures be implemented and 17 may, as appropriate, reject or condition approval of a new resource in light of the energy efficiency 18 alternative. It shall be the duty of the Commission to investigate from time to time the acts, practices, 19 20 rates, or charges of public utilities so as to determine whether such acts, practices, rates, or charges are 21 reasonably calculated to promote the maximum effective conservation and efficient use of energy and 22 capital resources used by public utilities in rendering utility service. Where the Commission finds that 23 the public interest would be served, it may order any public utility to eliminate, alter, or adopt a 24 substitute for any act, practice, rate, or charge which that is not reasonably calculated to promote the 25 maximum effective conservation and efficient use of energy and capital resources used by public utilities 26 in providing utility service, and it may further provide for the dissemination of information to the 27 public, either through the Commission staff or through a public utility, in order to promote public 28 understanding and cooperation in achieving effective conservation and efficient use of such resources; 29 provided, however, that nothing in this section subsection shall be construed to authorize the adoption of 30 any rate or charge which that is clearly not cost-based or which that is in the nature of a penalty for 31 otherwise permissible use of utility services. B. In furtherance of its duty to promote the efficient use of energy in the delivery of electric service 32 33 and natural gas service, the Commission shall administer and implement an energy efficiency program 34 that requires energy utilities to implement energy efficiency in accordance with the following: 35 1. As used in this subsection: 36 "Cost-effective" means that an energy efficiency measure or program satisfies the total resource cost 37 test. 38 "Electric utility" means any investor-owned electric utility or cooperative electric utility. 39 "Energy conservation" means demand-side management of energy supplies resulting in a net 40 reduction in energy use. Load management that reduces overall energy use is energy conservation. 41 "Energy efficiency" means measures or programs, which may consist of multiple measures, that 42 target consumer or utility behavior, equipment, processes, or devices designed to produce either an absolute decrease in consumption of electric energy or natural gas or a decrease in consumption of 43 electric energy or natural gas on a per unit of production basis without a reduction in the quality or 44 level of service provided to the energy consumer. Energy conservation and load management are 45 46 examples of energy efficiency. 47 "Gas utility" means any investor-owned public service company engaged in the business of furnishing 48 natural gas service to the public in the Commonwealth. 49 "Gross annual retail energy sales" means weather-normalized annual sales of electricity or natural 50 gas to all retail customers in a utility's Virginia service territory. 51 "Load management" means an activity, service, or technology to change the timing or the efficiency 52 of a customer's use of energy that allows a utility or a customer to respond to wholesale market 53 fluctuations or to reduce peak and seasonal demand for energy or capacity or to meet ancillary service 54 needs. 55 "Total resource cost test" means a test to determine if the benefit-cost ratio of a proposed energy efficiency program or measure is greater than one. "Benefit-cost ratio" means the ratio of the net 56 present value of the total benefits of a program or measure, including savings and non-energy benefits, 57 58 to the net present value of the total incremental costs of implementing that program or measure as

INTRODUCED

59 calculated over the lifetime of the measures implemented thereunder. An energy efficiency program or

60 measure that meets the total resource cost test is in the public interest. An energy efficiency program or
61 measure that fails the total resource cost test shall be reviewed by the Commission under the other tests
62 for approving energy efficiency set forth in §§ 56-576 and 56-600.

63 "Utility" means an electric utility or gas utility.

64 2. Each electric utility shall implement cost-effective energy efficiency measures to meet the following 65 incremental annual energy efficiency goals:

a. In calendar years 2017 and 2018, the electric utility shall have an annual energy-savings goal
equal to 0.25 percent of gross annual energy retail sales by the electric utility in the preceding calendar
year; and

b. In each subsequent two-year period, the annual energy savings goal shall be increased by 0.25
percent of gross annual retail sales by the electric utility until the annual energy savings goal reaches
two percent of gross annual retail sales in calendar years 2031 and thereafter.

3. Each gas utility shall implement cost-effective energy efficiency measures to meet the following incremental annual energy efficiency goals:

a. In calendar years 2017 and 2018, the gas utility shall have an annual energy-savings goal equal
 to 0.125 percent of gross annual energy retail sales by the gas utility in the preceding calendar year;
 and

b. In each subsequent two-year period, the annual energy savings goal shall be increased by 0.125
percent of gross annual retail sales by the gas utility until the annual energy savings goal reaches one percent of gross annual retail sales in calendar years 2031 and thereafter.

- 80 4. Each utility shall file an energy efficiency plan with the Commission in accordance with a filing
 81 schedule adopted by the Commission. By October 1, 2016, the Commission shall adopt a schedule for
 82 the filing and implementation of energy efficiency plans by utilities.
- 83 5. The Commission shall order changes to a plan submitted by a utility that does not demonstrate
 84 that the utility will achieve incremental annual energy efficiency goals.

6. The Commission shall require utilities to commence compliance efforts with the incremental
annual energy efficiency goals during calendar year 2017. The Commission may adjust the goal for
2017 if appropriate to address a partial year of implementation.

7. The Commission may design performance incentives that reward utilities for exceeding efficiency goals. The Commission may average performance over two-year periods and may consider significant, net additions of large customer loads when assessing compliance with the incremental annual energy efficiency goals.

92 8. The Commission shall require utilities to report annually to the Commission on their efforts and
 93 progress in meeting the incremental annual energy efficiency goals.

94 9. The Commission shall establish requirements that programs implemented by utilities to comply
95 with the incremental annual energy efficiency goals are (i) designed to decrease consumption of natural
96 gas or electricity, as applicable, or to reduce or defer the need for new utility facilities, fuel, or other
97 resources and (ii) determined by the Commission to be cost-effective. Without limitation, rate designs or
98 rate mechanisms, customer education, customer incentives, and weatherization programs are examples of
99 elements of energy efficiency programs that the Commission may consider.

100 10. The Commission shall report its findings regarding compliance with the requirements of the 101 incremental annual energy efficiency goals to the Governor and the General Assembly no later than July 102 1, 2021, and every five years thereafter.

103 11. The Commission by October 1, 2016, shall adopt such rules and regulations as may be necessary104 to implement the requirements of this subsection.

105 *C.* This section shall not apply to telephone companies.
