2016 SESSION

16105115D **HOUSE JOINT RESOLUTION NO. 120** 1 2 AMENDMENT IN THE NATURE OF A SUBSTITUTE 3 (Proposed by the House Committee on Rules 4 on February 9, 2016) 5 (Patron Prior to Substitute—Delegate Landes) 6 Directing the Joint Legislative Audit and Review Commission to study biosolids and industrial residuals 7 in Virginia. Report. 8 WHEREAS, prior to 1994, the Department of Environmental Quality (DEQ) regulated all land 9 application of treated sewage sludge, commonly known as biosolids, when biosolids were applied to 10 agricultural lands; and 11 WHEREAS, in 1994 the General Assembly directed the Virginia Department of Health (VDH) to adopt regulations to ensure that (i) sewage sludge permitted for land application, marketing, or 12 distribution is properly treated or stabilized; (ii) land application, marketing, and distribution of sewage 13 sludge is performed in a manner that will protect public health and the environment; and (iii) the escape, 14 15 flow, or discharge of sewage sludge into state waters in a manner that would cause pollution of state 16 waters, as those terms are defined in § 62.1-44.3 of the Code of Virginia, will be prevented; and 17 WHEREAS, in 2007, the General Assembly authorized the transfer of all regulatory oversight of biosolids from VDH to DEQ; and 18 19 WHEREAS, since 2008, biosolids have been land applied in at least 68 localities in the 20 Commonwealth, with at least 54 of those localities receiving biosolids annually; and 21 WHEREAS, between 2008 and 2013, an average of 221,000 dry tons of biosolids have been 22 beneficially recycled over an average of 63,000 acres annually; and 23 WHEREAS, this acreage represents less than one percent of the available crop land, pasture land, 24 and forest land in the Commonwealth; and 25 WHEREAS, the National Academy of Sciences reviewed current practices, public health concerns, and regulatory standards and concluded that the use of biosolids in the production of crops for human 26 27 consumption, when practiced in accordance with existing federal guidelines and regulations, presents 28 negligible risk to the consumer, to crop production, or to the environment; and 29 WHEREAS, in accordance with House Joint Resolution No. 694 of the 2007 Session of the General 30 Assembly, the Secretary of Natural Resources and Secretary of Health and Human Resources convened a panel of experts to study the impact of land application of biosolids on human health and the 31 32 environment; and 33 WHEREAS, the General Assembly posed specific questions to the panel and requested that it 34 consider the typical contaminant concentrations and application rates of biosolids in its study; and 35 WHEREAS, the panel included stakeholders from a broad range of disciplines, including medicine, 36 higher education, forestry, agronomy, environmental science, ecology, veterinary medicine, and law; and 37 WHEREAS, the Secretary of Natural Resources and Secretary of Health and Human Resources 38 published the final report of the panel in 2008 (House Document 27); and 39 WHEREAS, the panel uncovered no evidence or literature verifying a causal link between biosolids 40 and illness but recognized gaps in the science and knowledge surrounding this issue; and 41 WHEREAS, the panel stated that these gaps could be reduced through highly controlled 42 epidemiological studies relating to health effects of land-applied biosolids and through additional efforts 43 to reduce the limitations in quantifying all the chemical and biological constituents in biosolids; and WHEREAS, the panel stated that there are gaps in the research that characterizes the composition, 44 45 fate, and effects of pharmaceutical and personal care products and other persistent organic compounds in biosolids, as well as in other products, materials, and the environment; and 46 WHEREAS, House Joint Resolution No. 694 of the 2007 Session of the General Assembly also 47 **48** directed the panel to perform a detailed analysis of the chemical and biological composition of biosolids; 49 and 50 WHEREAS, detailed analysis of the vast number of constituents of biosolids, combined with the 51 specialized analytical methods employed to detect and quantify these constituents, involves significant 52 cost; and 53 WHEREAS, because no funding was available to conduct new analyses, the panel was limited in 54 performing a detailed analysis of the chemical and biological constituents of biosolids; and WHEREAS, under § 405(d)(2)(C) of the federal Clean Water Act, the U.S. Environmental Protection 55 Agency is required to conduct a review of the standards set out in 40 C.F.R. Part 503 not less than 56 every two years for purposes of regulating new pollutants where sufficient data exist; and 57 WHEREAS, § 62.1-44.3 of the Code of Virginia defines industrial wastes as "liquid or other wastes 58 59 resulting from any process of industry, manufacture, trade, or business or from the development of any

60 natural resources"; and

61 WHEREAS, the land application in Virginia of industrial wastes, including industrial residuals, is 62 regulated by the Virginia Department of Agriculture and Consumer Services (VDACS) and DEQ; and

WHEREAS, VDACS regulates certain industrial residuals as "industrial co-products" in accordance
 with the regulations applicable to agricultural liming materials and fertilizer, providing for the marketing
 and distribution of industrial wastes; and

66 WHEREAS, the land application of industrial residuals that is not regulated by VDACS is regulated67 by the State Water Control Board and DEQ; and

68 WHEREAS, industrial residuals from more than 35 facilities are land applied in Virginia pursuant to
 69 the terms of a Virginia Pollution Abatement or Virginia Pollutant Discharge Elimination System Permit
 70 issued by DEQ; and

WHÉREAS, since taking over the regulatory program from VDH, DEQ has conducted over 10,000
 inspections of biosolids and industrial residual land application sites; and

73 WHEREAS, biosolids and industrial residuals are beneficially land applied on less than one percent74 of the cropland, pastureland, and forestland on Virginia farms; and

WHEREAS, on average, less than 10,000 dry tons of industrial wastes are land applied annually in
 Virginia, an amount representing less than five percent of the annual amounts of biosolids land applied
 in Virginia; and

WHEREAS, the permits issued by DEQ include authorization for land application of industrial
wastes from a variety of facilities, including poultry hatching plants, breweries, rendering plants, chicken
and pork processing and packaging plants, plants for the processing of apples, fish, meat, tomatoes, and
wood, plants for the manufacturing of concentrated and dried soup stock, confections, beverages, and
snack cakes, farmers' markets, and municipal potable water treatment plants; and

83 WHEREAS, the Department of Environmental Quality's permit application requires the applicant to
84 submit details regarding the design of the industrial wastes treatment works, including the storage
85 facility and land area determination, as well as characterization of the industrial wastes that includes
86 analyses of heavy metals and other constituents; and

87 WHEREAS, DEQ examines the specific processes used at the facility generating the industrial wastes
88 to determine whether any waste constituents may represent a threat to human health and the environment; and

90 WHEREAS, DEQ requires the permit applicant to provide analyses to determine the capacity of the
91 land application site to assimilate nutrients, metals, and any other pollutants of concern, in order to
92 demonstrate that the activity may be performed safely and protect the environment; now, therefore, be it
93 RESOLVED by the House of Delegates, the Senate concurring, That the Joint Legislative Audit and

94 Review Commission be directed to study biosolids and industrial residuals in Virginia. 95 In conducting its study, the Joint Legislative Audit and Review Commission (JLARC) shall (i) 96 analyze the current scientific literature regarding the long-term effects of biosolids and industrial 97 residuals on health, including potential impacts on well, surface, and ground water; (ii) evaluate the regulatory requirements for land application and storage; (iii) evaluate the differences between biosolids 98 and industrial residuals rated as "Class A" materials and "Class B" materials; (iv) evaluate the feasibility, 99 100 especially for local governments, and including an economic impact on citizens of the Commonwealth, of requiring municipal utilities currently permitted to generate, as a byproduct of the municipal wastewater treatment process, "Class B" material to upgrade those facilities to generate "Class A" 101 102 material; (v) evaluate the effectiveness of the local monitoring component of the programs, while also 103 104 analyzing the potential for private contractors to serve in a monitoring capacity; (vi) evaluate both the potential outcomes and the probable costs from additional testing requirements for these products; (vii) 105 106 analyze potential alternatives for waste materials that are currently processed and treated to be land applied, and any potential costs that could be associated with such alternatives; (viii) evaluate the 107 108 contractual relationships among Virginia localities and the impacts of local agreements and decisions that 109 could affect wastewater treatment and land application, including septic tank pump out requirements; and (ix) where applicable, analyze the potential impacts of Virginia's biosolids and industrial residuals 110 111 regulations on agricultural interests and future economic development in the Commonwealth.

112 Technical assistance shall be provided to the Joint Legislative Audit and Review Commission by the Department of Environmental Quality, the Virginia Department of Agriculture and Consumer Services, 113 114 the Virginia Department of Health, the United States Geological Survey, and the members of the W3170, a multi-state workgroup composed of representatives of the U.S. Environmental Protection 115 116 Agency, the U.S. Department of Agriculture, universities, and municipal governments from across the United States that is conducting research on understanding the potential hazards and value of 117 constituents in biosolids and other residuals. All agencies and academic institutions of the 118 Commonwealth, local governments, and other interested parties as necessary shall provide assistance to 119 120 the Commission for this study, upon request.

121 The Joint Legislative Audit and Review Commission shall complete its meetings for the first year by

November 30, 2016, and for the second year by November 30, 2017, and the chairman shall submit to 122 123 the Division of Legislative Automated Systems an executive summary of its findings and 124 recommendations no later than the first day of the next Regular Session of the General Assembly for 125 each year. Each executive summary shall state whether the Commission intends to submit to the General 126 Assembly and the Governor a report of its findings and recommendations for publication as a House or 127 Senate document. The executive summaries and reports shall be submitted as provided in the procedures 128 of the Division of Legislative Automated Systems for the processing of legislative documents and 129 reports and shall be posted on the General Assembly's website.
