	23102338D						
1	SENATE BILL NO. 1231						
1 2 3	Offered January 11, 2023						
	Prefiled January 10, 2023						
4	A BILL to amend and reenact § 56-585.5 of the Code of Virginia, relating to renewable energy;						
5 6	biomass-fired facilities; Department of Forestry advisory panel; report.						
U	Patron—Lewis						
7							
8	Referred to Committee on Agriculture, Conservation and Natural Resources						
9 10	Be it enacted by the General Assembly of Virginia:						
11	1. That § 56-585.5 of the Code of Virginia is amended and reenacted as follows:						
12	§ 56-585.5. Generation of electricity from renewable and zero carbon sources.						
13	A. As used in this section:						
14	"Accelerated renewable energy buyer" means a commercial or industrial customer of a Phase I or						
15	Phase II Utility, irrespective of generation supplier, with an aggregate load over 25 megawatts in the						
16 17	prior calendar year, that enters into arrangements pursuant to subsection G, as certified by the Commission.						
18	"Aggregate load" means the combined electrical load associated with selected accounts of an						
19	accelerated renewable energy buyer with the same legal entity name as, or in the names of affiliated						
20	entities that control, are controlled by, or are under common control of, such legal entity or are the						
21	names of affiliated entities under a common parent.						
22 23	"Biomass" has the same meaning as provided in § 10.1-1308.1. "Control" has the same meaning as provided in § 56-585.1:11.						
23 24	"Falling water" means hydroelectric resources, including run-of-river generation from a combined						
25	pumped-storage and run-of-river facility. "Falling water" does not include electricity generated from						
26	pumped-storage facilities.						
27	"Low-income qualifying projects" means a project that provides a minimum of 50 percent of the						
28	respective electric output to low-income utility customers as that term is defined in § 56-576.						
29 30	"Phase I Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1. "Phase II Utility" has the same meaning as provided in subdivision A 1 of § 56-585.1.						
31	"Previously developed project site" means any property, including related buffer areas, if any, that						
32	has been previously disturbed or developed for non-single-family residential, nonagricultural, or						
33	nonsilvicultural use, regardless of whether such property currently is being used for any purpose.						
34	"Previously developed project site" includes a brownfield as defined in § 10.1-1230 or any parcel that						
35	has been previously used (i) for a retail, commercial, or industrial purpose; (ii) as a parking lot; (iii) as						
36 37	the site of a parking lot canopy or structure; (iv) for mining, which is any lands affected by coal mining that took place before August 3, 1977, or any lands upon which extraction activities have been permitted						
38	by the Department of Energy under Title 45.2; (v) for quarrying; or (vi) as a landfill.						
39	"Total electric energy" means total electric energy sold to retail customers in the Commonwealth						
40	service territory of a Phase I or Phase II Utility, other than accelerated renewable energy buyers, by the						
41	incumbent electric utility or other retail supplier of electric energy in the previous calendar year,						
42 43	excluding an amount equivalent to the annual percentages of the electric energy that was supplied to such sustainer from nuclear generating plants located within the Commonwealth in the provious calendar						
<b>4</b> 3 <b>4</b> 4	such customer from nuclear generating plants located within the Commonwealth in the previous calendar year, provided such nuclear units were operating by July 1, 2020, or from any zero-carbon electric						
45	generating facilities not otherwise RPS eligible sources and placed into service in the Commonwealth						
46	after July 1, 2030.						
47	"Zero-carbon electricity" means electricity generated by any generating unit that does not emit carbon						
48 40	dioxide as a by-product of combusting fuel to generate electricity.						
49 50	B. 1. By December 31, 2024, except for any coal-fired electric generating units (i) jointly owned with a cooperative utility or (ii) owned and operated by a Phase II Utility located in the coalfield region						
50 51							
52	generating units principally fueled by oil with a rated capacity in excess of 500 megawatts and all						
53	coal-fired electric generating units operating in the Commonwealth.						
54	2. By December 31, 2028, each Phase I and II Utility shall retire all biomass-fired electric generating						
55 56	units that do not co-fire with coal. 3. By December 31, 2045, each Phase I and II Utility shall retire all other electric generating units						
50 57	located in the Commonwealth that emit carbon as a by-product of combusting fuel to generate						
58	electricity, except for biomass-fired electric generating units that do not co-fire with coal.						

2/1/23 12:17

4. 3. A Phase I or Phase II Utility may petition the Commission for relief from the requirements of
this subsection on the basis that the requirement would threaten the reliability or security of electric
service to customers. The Commission shall consider in-state and regional transmission entity resources
and shall evaluate the reliability of each proposed retirement on a case-by-case basis in ruling upon any
such petition.

64 C. Each Phase I and Phase II Utility shall participate in a renewable energy portfolio standard 65 program (RPS Program) that establishes annual goals for the sale of renewable energy to all retail customers in the utility's service territory, other than accelerated renewable energy buyers pursuant to 66 subsection G, regardless of whether such customers purchase electric supply service from the utility or 67 from suppliers other than the utility. To comply with the RPS Program, each Phase I and Phase II **68** Utility shall procure and retire Renewable Energy Certificates (RECs) originating from renewable energy 69 70 standard eligible sources (RPS eligible sources). For purposes of complying with the RPS Program from 71 2021 to 2024, a Phase I and Phase II Utility may use RECs from any renewable energy facility, as defined in § 56-576, provided that such facilities are located in the Commonwealth or are physically 72 73 located within the PJM Interconnection, LLC (PJM) region. However, at no time during this period or 74 thereafter may any Phase I or Phase II Utility use RECs from (i) renewable thermal energy, or (ii) 75 renewable thermal energy equivalent, (iii) biomass-fired facilities that are outside the Commonwealth, or (iv) biomass-fired facilities operating in the Commonwealth as of January 1, 2020, that supply 10 76 77 percent or more of their annual net electrical generation to the electric grid or more than 15 percent of their annual total useful energy to any entity other than the manufacturing facility to which the 78 79 generating source is interconnected. From compliance year 2025 and all years after, each Phase I and 80 Phase II Utility may only use RECs from RPS eligible sources for compliance with the RPS Program.

81 In order to qualify as RPS eligible sources, such sources must be (a) electric-generating resources that generate electric energy derived from solar or wind located in the Commonwealth or off the 82 83 Commonwealth's Atlantic shoreline or in federal waters and interconnected directly into the Commonwealth or physically located within the PJM region; (b) falling water resources located in the 84 85 Commonwealth or physically located within the PJM region that were in operation as of January 1, 2020, that are owned by a Phase I or Phase II Utility or for which a Phase I or Phase II Utility has 86 87 entered into a contract prior to January 1, 2020, to purchase the energy, capacity, and renewable 88 attributes of such falling water resources; (c) non-utility-owned resources from falling water that (1) are 89 less than 65 megawatts, (2) began commercial operation after December 31, 1979, or (3) added 90 incremental generation representing greater than 50 percent of the original nameplate capacity after 91 December 31, 1979, provided that such resources are located in the Commonwealth or are physically 92 located within the PJM region; (d) waste-to-energy or landfill gas-fired generating resources located in the Commonwealth and in operation as of January 1, 2020, provided that such resources do not use 93 waste heat from fossil fuel combustion or forest or woody biomass as fuel; or (e) biomass-fired facilities 94 95 in operation in the Commonwealth and in operation as of January 1, 2020, that supply no more than 10 percent of their annual net electrical generation to the electric grid or no more than 15 percent of their 96 annual total useful energy to any entity other than the manufacturing facility to which the generating 97 98 source is interconnected. Regardless of any future maintenance, expansion, or refurbishment activities, 99 the total amount of RECs that may be sold by any RPS eligible source using biomass in any year shall be no more than the number of megawatt hours of electricity produced by that facility in 2019; 100 101 however, in no year may any RPS eligible source using biomass sell RECs in excess of the actual megawatt-hours of electricity generated by such facility that year that (1) have less than 52 megawatts 102 capacity; (2) began commercial operation before January 1, 2023; and (3) are either fueled by biomass 103 as defined in § 10.1-1308.1, fueled by forest-product manufacturing residuals, including spent pulping 104 liquor, bark, logging residues, paper recycling residuals, and biowastes, or fueled by forest-related 105 materials, solid woody waste materials, and crops and trees planted for the purpose of use in energy 106 production pursuant to § 10.1-1308.1. In order to comply with the RPS Program, each Phase I and 107 108 Phase II Utility may use and retire the environmental attributes associated with any existing owned or contracted solar, wind, or falling water, or biomass-fired electric generating resources in operation, or 109 proposed for operation, in the Commonwealth or physically located within the PJM region, with such 110 111 resource qualifying as a Commonwealth-located resource for purposes of this subsection, as of January 1, 2020, provided that such renewable attributes are verified as RECs consistent with the PJM-EIS 112 113 Generation Attribute Tracking System.

114 The RPS Program requirements shall be a percentage of the total electric energy sold in the previous 115 calendar year and shall be implemented in accordance with the following schedule:

110		Phase I Utilities	Phase II Utilities		
117					
118	Year	<b>RPS</b> Program Requirement	Year	<b>RPS Program Requirement</b>	
119	2021	6%	2021	14%	
120	2022	7%	2022	17%	

121	2023	8%	2023	20%
122	2024	10%	2024	23%
123	2025	14%	2025	26%
124	2026	17%	2026	29%
125	2027	20%	2027	32%
126	2028	24%	2028	35%
127	2029	27%	2029	38%
128	2030	30%	2030	41%
129	2031	33%	2031	45%
130	2032	36%	2032	49%
131	2033	39%	2033	52%
132	2034	42%	2034	55%
133	2035	45%	2035	59%
134	2036	53%	2036	63%
135	2037	53%	2037	67%
136	2038	57%	2038	71%
137	2039	61%	2039	75%
138	2040	65%	2040	79%
139	2041	68%	2041	83%
140	2042	71%	2042	87%
141	2043	74%	2043	91%
142	2044	77%	2044	95%
143	2045	80%	2045 and thereafter	100%
144	2046	84%		
145	2047	88%		
146	2048	92%		
147	2049	96%		
148	2050 and thereafter	100%		

A Phase II Utility shall meet one percent of the RPS Program requirements in any given compliance year with solar, wind, or anaerobic digestion resources of one megawatt or less located in the Commonwealth, with not more than 3,000 kilowatts at any single location or at contiguous locations owned by the same entity or affiliated entities and, to the extent that low-income qualifying projects are available, then no less than 25 percent of such one percent shall be composed of low-income qualifying projects.

Beginning with the 2025 compliance year and thereafter, at least 75 percent of all RECs used by a
Phase II Utility in a compliance period shall come from RPS eligible resources located in the
Commonwealth.

Any Phase I or Phase II Utility may apply renewable energy sales achieved or RECs acquired in excess of the sales requirement for that RPS Program to the sales requirements for RPS Program requirements in the year in which it was generated and the five calendar years after the renewable energy was generated or the RECs were created. To the extent that a Phase I or Phase II Utility procures RECs for RPS Program compliance from resources the utility does not own, the utility shall be entitled to recover the costs of such certificates at its election pursuant to § 56-249.6 or subdivision A 5 d of § 56-585.1.

165 D. Each Phase I or Phase II Utility shall petition the Commission for necessary approvals to procure 166 zero-carbon electricity generating capacity as set forth in this subsection and energy storage resources as 167 set forth in subsection E. To the extent that a Phase I or Phase II Utility constructs or acquires new 168 zero-carbon generating facilities or energy storage resources, the utility shall petition the Commission for 169 the recovery of the costs of such facilities, at the utility's election, either through its rates for generation 170 and distribution services or through a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1. 171 All costs not sought for recovery through a rate adjustment clause pursuant to subdivision A 6 of § 172 56-585.1 associated with generating facilities provided by sunlight or onshore or offshore wind are also 173 eligible to be applied by the utility as a customer credit reinvestment offset as provided in subdivision A 174 8 of § 56-585.1. Costs associated with the purchase of energy, capacity, or environmental attributes from 175 facilities owned by the persons other than the utility required by this subsection shall be recovered by the utility either through its rates for generation and distribution services or pursuant to § 56-249.6. 176

177 1. Each Phase I Utility shall petition the Commission for necessary approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of 600 megawatts
179 of generating capacity using energy derived from sunlight or onshore wind.

a. By December 31, 2023, each Phase I Utility shall petition the Commission for necessary approvals
to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental
attributes of at least 200 megawatts of generating capacity located in the Commonwealth using energy
derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be
from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities

INTRODUCED

185 owned by persons other than the utility, with the remainder, in the aggregate, being from construction or186 acquisition by such Phase I Utility.

b. By December 31, 2027, each Phase I Utility shall petition the Commission for necessary approvals
to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental
attributes of at least 200 megawatts of additional generating capacity located in the Commonwealth
using energy derived from sunlight or onshore wind, and 35 percent of such generating capacity
procured shall be from the purchase of energy, capacity, and environmental attributes from solar or
onshore wind facilities owned by persons other than the utility, with the remainder, in the aggregate,
being from construction or acquisition by such Phase I Utility.

c. By December 31, 2030, each Phase I Utility shall petition the Commission for necessary approvals
to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental
attributes of at least 200 megawatts of additional generating capacity located in the Commonwealth
using energy derived from sunlight or onshore wind, and 35 percent of such generating capacity
procured shall be from the purchase of energy, capacity, and environmental attributes from solar or
onshore wind facilities owned by persons other than the utility, with the remainder, in the aggregate,
being from construction or acquisition by such Phase I Utility.

d. Nothing in this subdivision 1 shall prohibit such Phase I Utility from constructing, acquiring, or
 entering into agreements to purchase the energy, capacity, and environmental attributes of more than 600
 megawatts of generating capacity located in the Commonwealth using energy derived from sunlight or
 onshore wind, provided the utility receives approval from the Commission pursuant to §§ 56-580 and
 56-585.1.

2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary 206 207 approvals to (i) construct, acquire, or enter into agreements to purchase the energy, capacity, and 208 environmental attributes of 16,100 megawatts of generating capacity located in the Commonwealth using 209 energy derived from sunlight or onshore wind, which shall include 1,100 megawatts of solar generation 210 of a nameplate capacity not to exceed three megawatts per individual project and 35 percent of such 211 generating capacity procured shall be from the purchase of energy, capacity, and environmental attributes 212 from solar facilities owned by persons other than a utility, including utility affiliates and deregulated 213 affiliates and (ii) pursuant to § 56-585.1:11, construct or purchase one or more offshore wind generation 214 facilities located off the Commonwealth's Atlantic shoreline or in federal waters and interconnected 215 directly into the Commonwealth with an aggregate capacity of up to 5,200 megawatts. At least 200 216 megawatts of the 16,100 megawatts shall be placed on previously developed project sites.

a. By December 31, 2024, each Phase II Utility shall petition the Commission for necessary
approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and
environmental attributes of at least 3,000 megawatts of generating capacity located in the
Commonwealth using energy derived from sunlight or onshore wind, and 35 percent of such generating
capacity procured shall be from the purchase of energy, capacity, and environmental attributes from
solar or onshore wind facilities owned by persons other than the utility, with the remainder, in the
aggregate, being from construction or acquisition by such Phase II Utility.

b. By December 31, 2027, each Phase II Utility shall petition the Commission for necessary approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and environmental attributes of at least 3,000 megawatts of additional generating capacity located in the Commonwealth using energy derived from sunlight or onshore wind, and 35 percent of such generating capacity procured shall be from the purchase of energy, capacity, and environmental attributes from solar or onshore wind facilities owned by persons other than the utility, with the remainder, in the aggregate, being from construction or acquisition by such Phase II Utility.

c. By December 31, 2030, each Phase II Utility shall petition the Commission for necessary
approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and
environmental attributes of at least 4,000 megawatts of additional generating capacity located in the
Commonwealth using energy derived from sunlight or onshore wind, and 35 percent of such generating
capacity procured shall be from the purchase of energy, capacity, and environmental attributes from
solar or onshore wind facilities owned by persons other than the utility, with the remainder, in the
aggregate, being from construction or acquisition by such Phase II Utility.

d. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary
approvals to construct, acquire, or enter into agreements to purchase the energy, capacity, and
environmental attributes of at least 6,100 megawatts of additional generating capacity located in the
Commonwealth using energy derived from sunlight or onshore wind, and 35 percent of such generating
capacity procured shall be from the purchase of energy, capacity, and environmental attributes from
solar or onshore wind facilities owned by persons other than the utility, with the remainder, in the
aggregate, being from construction or acquisition by such Phase II Utility.

e. Nothing in this subdivision 2 shall prohibit such Phase II Utility from constructing, acquiring, orentering into agreements to purchase the energy, capacity, and environmental attributes of more than

247 16,100 megawatts of generating capacity located in the Commonwealth using energy derived from
248 sunlight or onshore wind, provided the utility receives approval from the Commission pursuant to
249 §§ 56-580 and 56-585.1.

250 3. Nothing in this section shall prohibit a utility from petitioning the Commission to construct or 251 acquire zero-carbon electricity or from entering into contracts to procure the energy, capacity, and 252 environmental attributes of zero-carbon electricity generating resources in excess of the requirements in 253 subsection B. The Commission shall determine whether to approve such petitions on a stand-alone basis 254 pursuant to §§ 56-580 and 56-585.1, provided that the Commission's review shall also consider whether 255 the proposed generating capacity (i) is necessary to meet the utility's native load, (ii) is likely to lower 256 customer fuel costs, (iii) will provide economic development opportunities in the Commonwealth, and 257 (iv) serves a need that cannot be more affordably met with demand-side or energy storage resources.

258 Each Phase I and Phase II Utility shall, at least once every year, conduct a request for proposals for 259 new solar and wind resources. Such requests shall quantify and describe the utility's need for energy, 260 capacity, or renewable energy certificates. The requests for proposals shall be publicly announced and 261 made available for public review on the utility's website at least 45 days prior to the closing of such request for proposals. The requests for proposals shall provide, at a minimum, the following information: 262 263 (a) the size, type, and timing of resources for which the utility anticipates contracting; (b) any minimum 264 thresholds that must be met by respondents; (c) major assumptions to be used by the utility in the bid 265 evaluation process, including environmental emission standards; (d) detailed instructions for preparing 266 bids so that bids can be evaluated on a consistent basis; (e) the preferred general location of additional 267 capacity; and (f) specific information concerning the factors involved in determining the price and 268 non-price criteria used for selecting winning bids. A utility may evaluate responses to requests for 269 proposals based on any criteria that it deems reasonable but shall at a minimum consider the following 270 in its selection process: (1) the status of a particular project's development; (2) the age of existing 271 generation facilities; (3) the demonstrated financial viability of a project and the developer; (4) a 272 developer's prior experience in the field; (5) the location and effect on the transmission grid of a 273 generation facility; (6) benefits to the Commonwealth that are associated with particular projects, 274 including regional economic development and the use of goods and services from Virginia businesses; 275 and (7) the environmental impacts of particular resources, including impacts on air quality within the 276 Commonwealth and the carbon intensity of the utility's generation portfolio.

277 4. In connection with the requirements of this subsection, each Phase I and Phase II Utility shall, 278 commencing in 2020 and concluding in 2035, submit annually a plan and petition for approval for the 279 development of new solar and onshore wind generation capacity. Such plan shall reflect, in the 280 aggregate and over its duration, the requirements of subsection D concerning the allocation percentages 281 for construction or purchase of such capacity. Such petition shall contain any request for approval to construct such facilities pursuant to subsection D of § 56-580 and a request for approval or update of a rate adjustment clause pursuant to subdivision A 6 of § 56-585.1 to recover the costs of such facilities. 282 283 284 Such plan shall also include the utility's plan to meet the energy storage project targets of subsection E, 285 including the goal of installing at least 10 percent of such energy storage projects behind the meter. In 286 determining whether to approve the utility's plan and any associated petition requests, the Commission 287 shall determine whether they are reasonable and prudent and shall give due consideration to (i) the RPS 288 and carbon dioxide reduction requirements in this section, (ii) the promotion of new renewable 289 generation and energy storage resources within the Commonwealth, and associated economic 290 development, and (iii) fuel savings projected to be achieved by the plan. Notwithstanding any other 291 provision of this title, the Commission's final order regarding any such petition and associated requests 292 shall be entered by the Commission not more than six months after the date of the filing of such 293 petition.

294 5. If, in any year, a Phase I or Phase II Utility is unable to meet the compliance obligation of the 295 RPS Program requirements or if the cost of RECs necessary to comply with RPS Program requirements 296 exceeds \$45 per megawatt hour, such supplier shall be obligated to make a deficiency payment equal to 297 \$45 for each megawatt-hour shortfall for the year of noncompliance, except that the deficiency payment 298 for any shortfall in procuring RECs for solar, wind, or anaerobic digesters located in the Commonwealth 299 shall be \$75 per megawatts hour for resources one megawatt and lower. The amount of any deficiency 300 payment shall increase by one percent annually after 2021. A Phase I or Phase II Utility shall be entitled 301 to recover the costs of such payments as a cost of compliance with the requirements of this subsection 302 pursuant to subdivision A 5 d of § 56-585.1. All proceeds from the deficiency payments shall be 303 deposited into an interest-bearing account administered by the Department of Energy. In administering 304 this account, the Department of Energy shall manage the account as follows: (i) 50 percent of total 305 revenue shall be directed to job training programs in historically economically disadvantaged communities; (ii) 16 percent of total revenue shall be directed to energy efficiency measures for public 306 facilities; (iii) 30 percent of total revenue shall be directed to renewable energy programs located in 307

308 historically economically disadvantaged communities; and (iv) four percent of total revenue shall be309 directed to administrative costs.

For any project constructed pursuant to this subsection or subsection E, a utility shall, subject to a
competitive procurement process, procure equipment from a Virginia-based or United States-based
manufacturer using materials or product components made in Virginia or the United States, if reasonably
available and competitively priced.

E. To enhance reliability and performance of the utility's generation and distribution system, each
 Phase I and Phase II Utility shall petition the Commission for necessary approvals to construct or
 acquire new, utility-owned energy storage resources.

317 1. By December 31, 2035, each Phase I Utility shall petition the Commission for necessary approvals
318 to construct or acquire 400 megawatts of energy storage capacity. Nothing in this subdivision shall
319 prohibit a Phase I Utility from constructing or acquiring more than 400 megawatts of energy storage,
320 provided that the utility receives approval from the Commission pursuant to §§ 56-580 and 56-585.1.

321 2. By December 31, 2035, each Phase II Utility shall petition the Commission for necessary
322 approvals to construct or acquire 2,700 megawatts of energy storage capacity. Nothing in this
323 subdivision shall prohibit a Phase II Utility from constructing or acquiring more than 2,700 megawatts
324 of energy storage, provided that the utility receives approval from the Commission pursuant to
325 §§ 56-580 and 56-585.1.

326 3. No single energy storage project shall exceed 500 megawatts in size, except that a Phase II Utility327 may procure a single energy storage project up to 800 megawatts.

4. All energy storage projects procured pursuant to this subsection shall meet the competitiveprocurement protocols established in subdivision D 3.

330 5. After July 1, 2020, at least 35 percent of the energy storage facilities placed into service shall be (i) purchased by the public utility from a party other than the public utility or (ii) owned by a party 331 332 other than a public utility, with the capacity from such facilities sold to the public utility. By January 1, 2021, the Commission shall adopt regulations to achieve the deployment of energy storage for the 333 334 Commonwealth required in subdivisions 1 and 2, including regulations that set interim targets and 335 update existing utility planning and procurement rules. The regulations shall include programs and 336 mechanisms to deploy energy storage, including competitive solicitations, behind-the-meter incentives, 337 non-wires alternatives programs, and peak demand reduction programs.

338 F. All costs incurred by a Phase I or Phase II Utility related to compliance with the requirements of 339 this section or pursuant to § 56-585.1:11, including (i) costs of generation facilities powered by sunlight 340 or onshore or offshore wind, or energy storage facilities, that are constructed or acquired by a Phase I or 341 Phase II Utility after July 1, 2020, (ii) costs of capacity, energy, or environmental attributes from 342 generation facilities powered by sunlight or onshore or offshore wind, or falling water, or energy storage 343 facilities purchased by the utility from persons other than the utility through agreements after July 1, 344 2020, and (iii) all other costs of compliance, including costs associated with the purchase of RECs 345 associated with RPS Program requirements pursuant to this section shall be recovered from all retail 346 customers in the service territory of a Phase I or Phase II Utility as a non-bypassable charge, 347 irrespective of the generation supplier of such customer, except (a) as provided in subsection G for an 348 accelerated renewable energy buyer or (b) as provided in subdivision C 3 of § 56-585.1:11, with respect to the costs of an offshore wind generation facility, for a PIPP eligible utility customer or an advanced 349 350 clean energy buyer or qualifying large general service customer, as those terms are defined in § 56-585.1.11. If a Phase I or Phase II Utility serves customers in more than one jurisdiction, such 351 352 utility shall recover all of the costs of compliance with the RPS Program requirements from its Virginia 353 customers through the applicable cost recovery mechanism, and all associated energy, capacity, and 354 environmental attributes shall be assigned to Virginia to the extent that such costs are requested but not 355 recovered from any system customers outside the Commonwealth.

By September 1, 2020, the Commission shall direct the initiation of a proceeding for each Phase I and Phase II Utility to review and determine the amount of such costs, net of benefits, that should be allocated to retail customers within the utility's service territory which have elected to receive electric supply service from a supplier of electric energy other than the utility, and shall direct that tariff provisions be implemented to recover those costs from such customers beginning no later than January 1, 2021. Thereafter, such charges and tariff provisions shall be updated and trued up by the utility on an annual basis, subject to continuing review and approval by the Commission.

G. 1. An accelerated renewable energy buyer may contract with a Phase I or Phase II Utility, or a person other than a Phase I or Phase II Utility, to obtain (i) RECs from RPS eligible resources or (ii) bundled capacity, energy, and RECs from solar or wind generation resources located within the PJM region and initially placed in commercial operation after January 1, 2015, including any contract with a utility for such generation resources that does not allocate to or recover from any other customer of the utility the cost of such resources. Such an accelerated renewable energy buyer may offset all or a portion of its electric load for purposes of RPS compliance through such arrangements. An accelerated 370 renewable energy buyer shall be exempt from the assignment of non-bypassable RPS compliance costs 371 pursuant to subsection F, with the exception of the costs of an offshore wind generating facility pursuant 372 to § 56-585.1:11, based on the amount of RECs obtained pursuant to this subsection in proportion to the 373 customer's total electric energy consumption, on an annual basis. An accelerated renewable energy buyer 374 obtaining RECs only shall not be exempt from costs related to procurement of new solar or onshore 375 wind generation capacity, energy, or environmental attributes, or energy storage facilities, by the utility 376 pursuant to subsections D and E, however, an accelerated renewable energy buyer that is a customer of 377 a Phase II Utility and was subscribed, as of March 1, 2020, to a voluntary companion experimental 378 tariff offering of the utility for the purchase of renewable attributes from renewable energy facilities that 379 requires a renewable facilities agreement and the purchase of a minimum of 2,000 renewable attributes 380 annually, shall be exempt from allocation of the net costs related to procurement of new solar or 381 onshore wind generation capacity, energy, or environmental attributes, or energy storage facilities, by the utility pursuant to subsections D and E, based on the amount of RECs associated with the customer's 382 383 renewable facilities agreements associated with such tariff offering as of that date in proportion to the 384 customer's total electric energy consumption, on an annual basis. To the extent that an accelerated 385 renewable energy buyer contracts for the capacity of new solar or wind generation resources pursuant to 386 this subsection, the aggregate amount of such nameplate capacity shall be offset from the utility's 387 procurement requirements pursuant to subsection D. All RECs associated with contracts entered into by 388 an accelerated renewable energy buyer with the utility, or a person other than the utility, for an RPS 389 Program shall not be credited to the utility's compliance with its RPS requirements, and the calculation 390 of the utility's RPS Program requirements shall not include the electric load covered by customers 391 certified as accelerated renewable energy buyers.

2. Each Phase I or Phase II Utility shall certify, and verify as necessary, to the Commission that the accelerated renewable energy buyer has satisfied the exemption requirements of this subsection for each year, or an accelerated renewable energy buyer may choose to certify satisfaction of this exemption by reporting to the Commission individually. The Commission may promulgate such rules and regulations as may be necessary to implement the provisions of this subsection.

397 3. Provided that no incremental costs associated with any contract between a Phase I or Phase II
398 Utility and an accelerated renewable energy buyer is allocated to or recovered from any other customer
399 of the utility, any such contract with an accelerated renewable energy buyer that is a jurisdictional
400 customer of the utility shall not be deemed a special rate or contract requiring Commission approval
401 pursuant to § 56-235.2.

402 H. No customer of a Phase II Utility with a peak demand in excess of 100 megawatts in 2019 that 403 elected pursuant to subdivision A 3 of § 56-577 to purchase electric energy from a competitive service 404 provider prior to April 1, 2019, shall be allocated any non-bypassable charges pursuant to subsection F 405 for such period that the customer is not purchasing electric energy from the utility, and such customer's 406 electric load shall not be included in the utility's RPS Program requirements. No customer of a Phase I 407 Utility that elected pursuant to subdivision A 3 of § 56-577 to purchase electric energy from a competitive service provider prior to February 1, 2019, shall be allocated any non-bypassable charges 408 409 pursuant to subsection F for such period that the customer is not purchasing electric energy from the 410 utility, and such customer's electric load shall not be included in the utility's RPS Program requirements.

I. Nothing in this section shall apply to any entity organized under Chapter 9.1 (§ 56-231.15 et seq.).
J. The Commission shall adopt such rules and regulations as may be necessary to implement the provisions of this section, including a requirement that participants verify whether the RPS Program requirements are met in accordance with this section.

2. That the Department of Forestry (the Department) shall convene an advisory panel to assist in 415 416 further developing criteria for potential limitations on the use of forest-related materials and solid 417 woody waste materials for biomass-fired electric generating units beginning commercial operation 418 in the Commonwealth after January 1, 2023. The advisory panel consist of industry 419 representatives and other stakeholders as the Department deems appropriate. The advisory panel 420 shall examine the following factors in determining criteria for potential limitations on the use of 421 forest-related materials and solid woody waste materials for biomass-fired electric generating units 422 beginning commercial operation in the Commonwealth after January 1, 2023: (i) policies in 423 southeastern states and other states participating in the regional transmission organization 424 interchange as they relate to the use of biomass for electricity generation; (ii) a third-party study 425 and analysis of the Commonwealth's forest resources and appropriate siting of new biomass-fired 426 electric generating units beginning commercial operation after January 1, 2023, which study shall 427 include (a) an analysis of the amount of forest-related materials and solid woody waste that can be 428 sustainably consumed annually without disrupting existing markets and consideration of 429 technological advances in biomass energy generation, (b) recommendations related to developing 430 sustainable biomass harvesting guidelines, and (c) any other factors as determined by the

431 Department; and (iii) benefits to the Commonwealth's hardwood forest health as a result of 432 expanded use of biomass for electricity generation. The advisory panel may consider other factors 433 as the Department deems necessary. The Department shall submit a report of the panel's findings 434 and any recommendations to the Chairmen of the House Committee on Commerce and Energy 435 and the Senate Committee on Commerce and Labor no later than December 1, 2023.
