# 2016 SESSION

**ENROLLED** 

### 1

## VIRGINIA ACTS OF ASSEMBLY - CHAPTER

An Act to amend and reenact § 62.1-44.19:15 of the Code of Virginia, relating to the Chesapeake Bay 2 3 Watershed Nutrient Credit Exchange Program.

4 5

#### Approved

#### Be it enacted by the General Assembly of Virginia: 6

7 1. That § 62.1-44.19:15 of the Code of Virginia is amended and reenacted as follows: 8

### § 62.1-44.19:15. New or expanded facilities.

9 A. An owner or operator of a new or expanded facility shall comply with the applicable requirements 10 of this section as a condition of the facility's coverage under the general permit.

1. An owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination 11 System permit first issued before July 1, 2005, that expands his facility to discharge 100,000 gallons or 12 13 more per day, or an equivalent load directly into tidal waters, or 500,000 gallons or more per day, or an equivalent load, directly into nontidal waters shall demonstrate to the Department that he has acquired 14 15 waste load allocations sufficient to offset any increase in his delivered total nitrogen and delivered total phosphorus loads resulting from any expansion beyond his waste load allocations or permitted design 16 17 capacity as of July 1, 2005, and will install state-of-the-art nutrient removal technology at the time of 18 the expansion.

19 2. An owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination System permit first issued before July 1, 2005, that expands his facility to discharge 100,000 gallons or 20 more per day up to and including 499,999 gallons per day, or an equivalent load, directly into nontidal 21 waters, shall demonstrate to the Department that he has acquired waste load allocations sufficient to 22 23 offset any increase in his delivered total nitrogen and delivered total phosphorus loads resulting from 24 any expansion beyond his permitted capacity as of July 1, 2005, and will install, at a minimum, 25 biological nutrient removal technology at the time of the expansion.

26 3. An owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination 27 System permit first issued before July 1, 2005, that expands his facility to discharge 40,000 gallons or more per day up to and including 99,999 gallons per day, or an equivalent load, directly into tidal or 28 29 nontidal waters, shall demonstrate to the Department that he has acquired waste load allocations 30 sufficient to offset any increase in his delivered total nitrogen and delivered total phosphorus loads 31 resulting from any expansion beyond his permitted capacity as of July 1, 2005.

32 4. An owner or operator of a facility authorized by a Virginia Pollutant Discharge Elimination 33 System permit first issued on or after July 1, 2005, to discharge 40,000 gallons or more per day, or an 34 equivalent load, shall demonstrate to the Department that he has acquired waste load allocations 35 sufficient to offset his delivered total nitrogen and delivered total phosphorus loads, and will install (i) at 36 a minimum, biological nutrient removal technology at any facility authorized to discharge up to and 37 including 99,999 gallons per day, or an equivalent load, directly into tidal and nontidal waters, or up to 38 and including 499,999 gallons per day, or an equivalent load, to nontidal waters; and (ii) state-of-the-art 39 nutrient removal technology at any facility authorized to discharge 100,000 gallons or more per day, or 40 an equivalent load, directly into tidal waters, or 500,000 gallons or more per day, or an equivalent load, 41 directly into nontidal waters.

42 5. An owner or operator of a facility treating domestic sewage authorized by a Virginia Pollutant 43 Discharge Elimination System permit with a discharge greater than 1,000 gallons per day up to and including 39,999 gallons per day that has not commenced the discharge of pollutants prior to January 1, 44 45 2011, shall demonstrate to the Department that he has acquired waste load allocations sufficient to offset his delivered total nitrogen and delivered total phosphorus loads prior to commencing the discharge, 46 47 except when the facility is for short-term temporary use only or when treatment of domestic sewage is 48 not the primary purpose of the facility.

49 B. Waste load allocations required by this section to offset new or increased delivered total nitrogen 50 and delivered total phosphorus loads shall be acquired in accordance with this subsection. 51

1. Such allocations may be acquired from one or a combination of the following:

52 a. Acquisition of all or a portion of the waste load allocations or point source nitrogen or point 53 source phosphorus credits from one or more permitted facilities in the same tributary;

54 b. Acquisition of credits certified by the Board pursuant to § 62.1-44.19:20. Such best management 55 practices shall achieve reductions beyond those already required by or funded under federal or state law, 56 or the Virginia Chesapeake Bay TMDL Watershed Implementation Plan, and shall be installed in the

[H 448]

HB448ER

same tributary in which the new or expanded facility is located and included as conditions of thefacility's individual Virginia Pollutant Discharge Elimination System permit;

59 c. Acquisition of allocations purchased through the Nutrient Offset Fund established pursuant to § 10.1-2128.2; or

61 d. Acquisition of allocations through such other means as may be approved by the Department on a case-by-case basis.

63 e. Acquisition of credits or allocations through the implementation of best management practices on 64 lands owned or controlled by, or under contractual obligation with, the new or expanded facility that 65 achieve reductions greater than those currently required by or funded under federal or state law, or the Virginia Chesapeake Bay TMDL Watershed Implementation Plan, subject to the approval by the Board 66 in accordance with standards and procedures that are consistent with those established in 67 § 62.1-44.19:20. Any such best management practices shall be implemented on lands within the same 68 tributary as the new or expanded facility, and any credits assigned by the Board based on those 69 practices shall be subject to adjustment based on the relevant delivery factor, as defined in 70 71 § 62.1-44.19:13.

2. Such allocations or credits shall be provided for a minimum period of five years with each registration under the general permit. This subdivision shall not preclude the Board from adopting longer-term or permanent allocation requirements by regulation allocations, except that such allocations are subject to modification by the Board where necessary to conform to the Chesapeake Bay TMDL.

3. The Board shall give priority to allocations or credits acquired in accordance with subdivisions 1
a, 1 b, and 1 d. The Board shall approve allocations acquired in accordance with subdivision 1 d only
after the owner or operator has demonstrated that he has made a good faith effort to acquire sufficient
allocations in accordance with subdivisions 1 a, 1 b, and 1 d and that such allocations are not
reasonably available taking into account timing, cost, and other relevant factors.

4. Notwithstanding the priority provisions in subdivision 3, the Board may grant a waste load 81 allocation in accordance with subdivision 1 d to an owner or operator of a facility authorized by a 82 Virginia Pollution Abatement permit to land apply domestic sewage if (i) the Virginia Pollution 83 Abatement permit was issued before July 1, 2005; (ii) the waste load allocation does not exceed such 84 facility's permitted design capacity as of July 1, 2005; (iii) the waste treated by the existing facility is 85 going to be treated and discharged pursuant to a Virginia Pollutant Discharge Elimination System permit 86 for a new discharge; and (iv) the owner or operator installs state-of-the-art nutrient removal technology 87 88 at such facility. Such facilities cannot generate credits or waste load allocations, based upon the removal 89 of land application sites, that can be acquired by other permitted facilities to meet the requirements of 90 this article.

91 C. Until such time as the Director finds that no allocations are reasonably available in an individual 92 tributary, the general permit shall provide for the acquisition of allocations through payments into the 93 Nutrient Offset Fund established in § 10.1-2128.2. Such payments shall be promptly applied by the 94 Department to achieve equivalent point or nonpoint source reductions in the same tributary beyond those reductions already required by or funded under federal or state law or the Virginia Chesapeake Bay TMDL Watershed Implementation Plan. The general permit shall base the cost of each pound of 95 96 allocation on (i) the estimated cost of achieving a reduction of one pound of nitrogen or phosphorus at 97 98 the facility that is securing the allocation, or comparable facility, for each pound of allocation acquired; 99 or (ii) the average cost of reducing two pounds of nitrogen or phosphorus from nonpoint sources in the same tributary for each pound of allocation acquired, whichever is higher. Upon each reissuance of the 100 101 general permit, the Board may adjust the cost of each pound of allocation based on current costs and 102 cost estimates.

103 D. The acquisition of nutrient allocations or credits from animal waste-to-energy or animal waste 104 reduction facilities, or the acquisition of such nutrient allocations or credits from entities acting on 105 behalf of such facilities, shall be considered point source allocations or credits for all nutrient trading 106 purposes and shall not be subject to any otherwise applicable nonpoint source trading ratio if the best 107 management practice being used to generate such nutrient allocations or credits is a point source nutrient 108 removal technology. Point source nutrient removal technology shall include animal waste gasification in 109 which lab analysis of the animal waste reveals the concentration of nutrients in the animal waste being fed into the gasifier, and the fate of the nutrients during the animal waste gasification process, is known 110 111 and documented using studies such as air emissions tests and ash analyses.
