

VIRGINIA ACTS OF ASSEMBLY -- 2018 SESSION

CHAPTER 93

An Act to amend and reenact § 3.2-6522 of the Code of Virginia, relating to rabies; quarantine of dog after possible exposure; police dogs.

[H 359]

Approved March 2, 2018

Be it enacted by the General Assembly of Virginia:

1. That § 3.2-6522 of the Code of Virginia is amended and reenacted as follows:

§ 3.2-6522. Rabid animals.

A. When there is sufficient reason to believe that the risk of exposure to rabies is elevated, the governing body of any locality may enact, and the local health director may recommend, an emergency ordinance that shall become effective immediately upon passage, requiring owners of all dogs and cats therein to keep the same confined on their premises unless leashed under restraint of the owner in such a manner that persons or animals will not be subject to the danger of being bitten by a rabid animal. Any such emergency ordinance enacted pursuant to the provisions of this section shall be operative for a period not to exceed 30 days unless renewed by the governing body of such locality in consultation with the local health director. The governing body of any locality shall also have the power and authority to pass ordinances restricting the running at large in their respective jurisdiction of dogs and cats that have not been inoculated or vaccinated against rabies and to provide penalties for the violation thereof.

B. Any dog or cat showing active signs of rabies or suspected of having rabies that is not known to have exposed a person, companion animal, or livestock to rabies shall be confined under competent observation for such a time as may be necessary to determine a diagnosis. If, in the discretion of the local health director, confinement is impossible or impracticable, such dog or cat shall be euthanized by one of the methods approved by the State Veterinarian as provided in § 3.2-6546. The disposition of other animals showing active signs of rabies shall be determined by the local health director and may include euthanasia and testing.

C. Every person having knowledge of the existence of an animal that is suspected to be rabid and that may have exposed a person, companion animal, or livestock to rabies shall report immediately to the local health department the existence of such animal, the place where seen, the owner's name, if known, and the signs suggesting rabies.

D. Any dog or cat for which no proof of current rabies vaccination is available and that may have been exposed to rabies through a bite, or through saliva or central nervous system tissue, in a fresh open wound or mucous membrane, by an animal suspected to be rabid shall be isolated in a public animal shelter, kennel, or enclosure approved by the local health department for a period not to exceed six months at the expense of the owner or custodian in a manner and by a date certain as determined by the local health director. A rabies vaccination shall be administered by a licensed veterinarian prior to release. Inactivated rabies vaccine may be administered at the beginning of isolation. Any dog or cat so bitten, or exposed to rabies through saliva or central nervous system tissue, in a fresh open wound or mucous membrane with proof of current vaccination, shall be revaccinated by a licensed veterinarian immediately following the exposure and shall be confined to the premises of the owner or custodian, or other site as may be approved by the local health department at the expense of the owner or custodian, for a period of 45 days. If the local health director determines that isolation is not feasible or maintained, such dog or cat shall be euthanized by one of the methods approved by the State Veterinarian as provided in § 3.2-6546. The disposition of such dogs or cats not so confined shall be at the discretion of the local health director.

E. At the discretion of the local health director, any animal that may have exposed a person shall be confined under competent observation for 10 days at the expense of the owner or custodian, unless the animal develops active signs of rabies, expires, or is euthanized before that time. A seriously injured or sick animal may be euthanized as provided in § 3.2-6546. *When determining whether a dog that has bitten a person shall be so confined, the health director shall weigh any proof that the dog has current certificates for both (i) rabies vaccination and (ii) special training for police work, military work, or work as a first responder.*

F. When any suspected rabid animal, other than a dog or cat, exposes or may have exposed a person to rabies through a bite, or through saliva or central nervous system tissue, in a fresh open wound or mucous membrane, decisions regarding the disposition of that animal shall be at the discretion of a local health director and may include euthanasia as provided in § 3.2-6546, or as directed by the state agency with jurisdiction over that species. When any animal, other than a dog or cat, is exposed or may have been exposed to rabies through a bite, or through saliva or central nervous system tissue, in a fresh open wound or mucous membrane, by an animal suspected to be rabid, decisions regarding the disposition of

that newly exposed animal shall be at the discretion of a local health director.

G. When any animal may have exposed a person to rabies and subsequently expires due to illness or euthanasia, either within an observation period, where applicable, or as part of a public health investigation, its head or brain shall be sent to the Division of Consolidated Laboratory Services of the Department of General Services or be tested as directed by the local health department.
