

18101561D

SENATE BILL NO. 82

Offered January 10, 2018

Prefiled December 8, 2017

A *BILL to amend and reenact § 56-594 of the Code of Virginia, relating to electric utility regulation; agricultural net energy metering.*

Patrons—Edwards and Petersen; Delegate: Kory

Referred to Committee on Commerce and Labor

Be it enacted by the General Assembly of Virginia:

1. That § 56-594 of the Code of Virginia is amended and reenacted as follows:

§ 56-594. Net energy metering provisions.

A. The Commission shall establish by regulation a program that affords eligible customer-generators the opportunity to participate in net energy metering, and a program, to begin no later than July 1, 2014, for customers of investor-owned utilities and no later than July 1, 2015, for customers of electric cooperatives, to afford eligible agricultural customer-generators the opportunity to participate in net energy metering. The regulations may include, but need not be limited to, requirements for (i) retail sellers; (ii) owners or operators of distribution or transmission facilities; (iii) providers of default service; (iv) eligible customer-generators; (v) eligible agricultural customer-generators; or (vi) any combination of the foregoing, as the Commission determines will facilitate the provision of net energy metering, provided that the Commission determines that such requirements do not adversely affect the public interest. On and after July 1, 2017, small agricultural generators or eligible agricultural customer-generators may elect to interconnect pursuant to the provisions of this section or as small agricultural generators pursuant to § 56-594.2, but not both. Existing eligible agricultural customer-generators may elect to become small agricultural generators, but may not revert to being eligible agricultural customer-generators after such election. ~~On and after July 1, 2019, interconnection of eligible agricultural customer-generators shall cease for electric cooperatives only, and such facilities shall interconnect solely as small agricultural generators. For electric cooperatives, eligible agricultural customer-generators whose renewable energy generating facilities were interconnected before July 1, 2019, may continue to participate in net energy metering pursuant to this section for a period not to exceed 25 years from the date of their renewable energy generating facility's original interconnection.~~

B. For the purpose of this section:

"Eligible agricultural customer-generator" means a customer that operates a renewable energy generating facility as part of an agricultural business, which generating facility (i) uses as its sole energy source solar power, wind power, *falling water*, or aerobic or anaerobic digester gas; (ii) does not have an aggregate generation capacity of more than 500 ~~kilowatts~~, *one megawatt*; (iii) is located on land owned or controlled by the agricultural business; (iv) is connected to the customer's wiring on the customer's side of its interconnection with the distributor; (v) is interconnected and operated in parallel with an electric company's transmission and distribution facilities; and (vi) is used primarily to provide energy to metered accounts of the agricultural business. An eligible agricultural customer-generator may be served by multiple meters that are located at ~~separate but contiguous sites on one parcel or on multiple parcels~~, such that the eligible agricultural customer-generator may aggregate in a single account the electricity consumption and generation measured by the meters, provided that the same utility serves all such meters. The aggregated load shall be served under the appropriate tariff.

"Eligible customer-generator" means a customer that owns and operates, or contracts with other persons to own, operate, or both, an electrical generating facility that (i) has a capacity of not more than 20 kilowatts for residential customers and not more than one megawatt for nonresidential customers on an electrical generating facility placed in service after July 1, 2015; (ii) uses as its total source of fuel renewable energy, as defined in § 56-576; (iii) is located on the customer's premises and is connected to the customer's wiring on the customer's side of its interconnection with the distributor; (iv) is interconnected and operated in parallel with an electric company's transmission and distribution facilities; and (v) is intended primarily to offset all or part of the customer's own electricity requirements. In addition to the electrical generating facility size limitations in clause (i), the capacity of any generating facility installed under this section after July 1, 2015, shall not exceed the expected annual energy consumption based on the previous 12 months of billing history or an annualized calculation of billing history if 12 months of billing history is not available.

"Net energy metering" means measuring the difference, over the net metering period, between (i) electricity supplied to an eligible customer-generator or eligible agricultural customer-generator from the

59 electric grid and (ii) the electricity generated and fed back to the electric grid by the eligible
60 customer-generator or eligible agricultural customer-generator.

61 "Net metering period" means the 12-month period following the date of final interconnection of the
62 eligible customer-generator's or eligible agricultural customer-generator's system with an electric service
63 provider, and each 12-month period thereafter.

64 "Small agricultural generator" has the same meaning that is ascribed to that term in § 56-594.2.

65 C. The Commission's regulations shall ensure that (i) the metering equipment installed for net
66 metering shall be capable of measuring the flow of electricity in two directions and (ii) any eligible
67 customer-generator or *eligible agricultural customer-generator* seeking to participate in net energy
68 metering shall notify its supplier and receive approval to interconnect prior to installation of an electrical
69 generating facility. The electric distribution company shall have 30 days from the date of notification for
70 residential facilities, and 60 days from the date of notification for nonresidential facilities, to determine
71 whether the interconnection requirements have been met. Such regulations shall allocate fairly the cost
72 of such equipment and any necessary interconnection. An eligible customer-generator's electrical
73 generating system, and each electrical generating system of an eligible agricultural customer-generator,
74 shall meet all applicable safety and performance standards established by the National Electrical Code,
75 the Institute of Electrical and Electronics Engineers, and accredited testing laboratories such as
76 Underwriters Laboratories. Beyond the requirements set forth in this section and to ensure public safety,
77 power quality, and reliability of the supplier's electric distribution system, an eligible customer-generator
78 or eligible agricultural customer-generator whose electrical generating system meets those standards and
79 rules shall bear all reasonable costs of equipment required for the interconnection to the supplier's
80 electric distribution system, including costs, if any, to (a) install additional controls, (b) perform or pay
81 for additional tests, and (c) purchase additional liability insurance.

82 D. The Commission shall establish minimum requirements for contracts to be entered into by the
83 parties to net metering arrangements. Such requirements shall protect the eligible customer-generator or
84 eligible agricultural customer-generator against discrimination by virtue of its status as an eligible
85 customer-generator or eligible agricultural customer-generator, and permit customers that are served on
86 time-of-use tariffs that have electricity supply demand charges contained within the electricity supply
87 portion of the time-of-use tariffs to participate as an eligible customer-generator or eligible agricultural
88 customer-generator. Notwithstanding the cost allocation provisions of subsection C, eligible
89 customer-generators or eligible agricultural customer-generators served on demand charge-based
90 time-of-use tariffs shall bear the incremental metering costs required to net meter such customers.

91 E. If electricity generated by an eligible customer-generator or eligible agricultural customer-generator
92 over the net metering period exceeds the electricity consumed by the eligible customer-generator or
93 eligible agricultural customer-generator, the customer-generator or eligible agricultural
94 customer-generator shall be compensated for the excess electricity if the entity contracting to receive
95 such electric energy and the eligible customer-generator or eligible agricultural customer-generator enter
96 into a power purchase agreement for such excess electricity. Upon the written request of the eligible
97 customer-generator or eligible agricultural customer-generator, the supplier that serves the eligible
98 customer-generator or eligible agricultural customer-generator shall enter into a power purchase
99 agreement with the requesting eligible customer-generator or eligible agricultural customer-generator that
100 is consistent with the minimum requirements for contracts established by the Commission pursuant to
101 subsection D. The power purchase agreement shall obligate the supplier to purchase such excess
102 electricity at the rate that is provided for such purchases in a net metering standard contract or tariff
103 approved by the Commission, unless the parties agree to a higher rate. The eligible customer-generator
104 or eligible agricultural customer-generator owns any renewable energy certificates associated with its
105 electrical generating facility; however, at the time that the eligible customer-generator or eligible
106 agricultural customer-generator enters into a power purchase agreement with its supplier, the eligible
107 customer-generator or eligible agricultural customer-generator shall have a one-time option to sell the
108 renewable energy certificates associated with such electrical generating facility to its supplier and be
109 compensated at an amount that is established by the Commission to reflect the value of such renewable
110 energy certificates. Nothing in this section shall prevent the eligible customer-generator or eligible
111 agricultural customer-generator and the supplier from voluntarily entering into an agreement for the sale
112 and purchase of excess electricity or renewable energy certificates at mutually-agreed upon prices if the
113 eligible customer-generator or eligible agricultural customer-generator does not exercise its option to sell
114 its renewable energy certificates to its supplier at Commission-approved prices at the time that the
115 eligible customer-generator or eligible agricultural customer-generator enters into a power purchase
116 agreement with its supplier. All costs incurred by the supplier to purchase excess electricity and
117 renewable energy certificates from eligible customer-generators or eligible agricultural
118 customer-generators shall be recoverable through its Renewable Energy Portfolio Standard (RPS) rate
119 adjustment clause, if the supplier has a Commission-approved RPS plan. If not, then all costs shall be
120 recoverable through the supplier's fuel adjustment clause. For purposes of this section, "all costs" shall

121 be defined as the rates paid to the eligible customer-generator or eligible agricultural customer-generator
122 for the purchase of excess electricity and renewable energy certificates and any administrative costs
123 incurred to manage the eligible customer-generator's or eligible agricultural customer-generator's power
124 purchase arrangements. The net metering standard contract or tariff shall be available to eligible
125 customer-generators or eligible agricultural customer-generators on a first-come, first-served basis in
126 each electric distribution company's Virginia service area until the rated generating capacity owned and
127 operated by eligible customer-generators, eligible agricultural customer-generators, and small agricultural
128 generators in the state reaches one percent of each electric distribution company's adjusted Virginia
129 peak-load forecast for the previous year, and shall require the supplier to pay the eligible
130 customer-generator or eligible agricultural customer-generator for such excess electricity in a timely
131 manner at a rate to be established by the Commission.

132 F. Any residential eligible customer-generator or eligible agricultural customer-generator who owns
133 and operates, or contracts with other persons to own, operate, or both, an electrical generating facility
134 with a capacity that exceeds 10 kilowatts shall pay to its supplier, in addition to any other charges
135 authorized by law, a monthly standby charge. The amount of the standby charge and the terms and
136 conditions under which it is assessed shall be in accordance with a methodology developed by the
137 supplier and approved by the Commission. The Commission shall approve a supplier's proposed standby
138 charge methodology if it finds that the standby charges collected from all such eligible
139 customer-generators and eligible agricultural customer-generators allow the supplier to recover only the
140 portion of the supplier's infrastructure costs that are properly associated with serving such eligible
141 customer-generators or eligible agricultural customer-generators. Such an eligible customer-generator or
142 eligible agricultural customer-generator shall not be liable for a standby charge until the date specified in
143 an order of the Commission approving its supplier's methodology.
